

Sorting the Truss List in iModel

Alpine is dedicated to creating efficient solutions to daily design needs. One simple and important feature is sorting the truss list in IntelliVIEW.

The truss list in iModel is populated from the job items grid in iCommand. Sort the desired information by clicking on the title header. In this instance, the truss list is being sorted by Part Name. Click the title header to change the list between ascending and descending order. Right click on the title header and select "Save Sort Order" to lock the list order. Select the iModel button to return to the layout, and the truss list will appear in the order saved in iCommand.
