

### Using CTRL + Select Wall to Add Walls

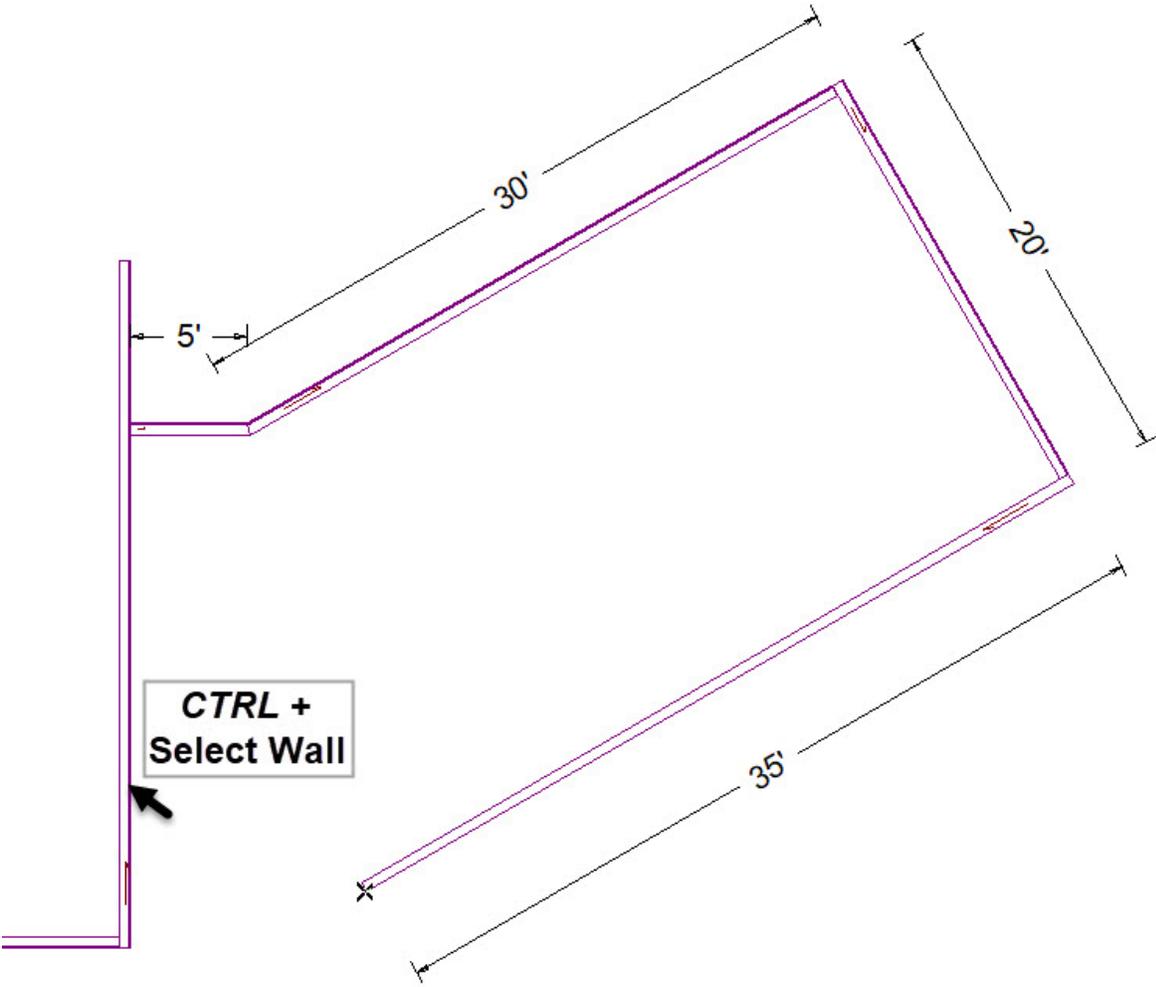

Alpine's commitment to our customers shows in the details of IntelliVIEW. From the large concepts to the smaller tools, our objective is to provide software that is efficient and intuitive to increase productivity.

House plans come in all shapes in sizes, but sometimes they may have incorrect or missing wall dimensions. A simple but effective tool used to close a wall against another wall is CTRL + Select Wall.

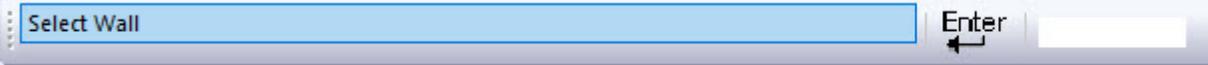

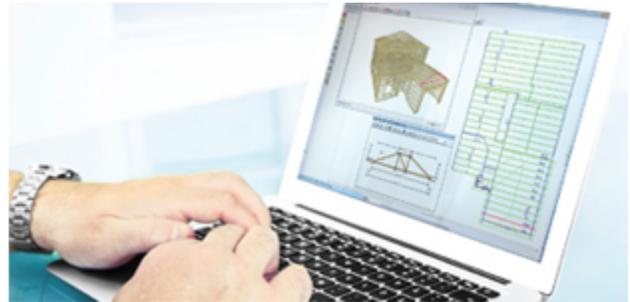

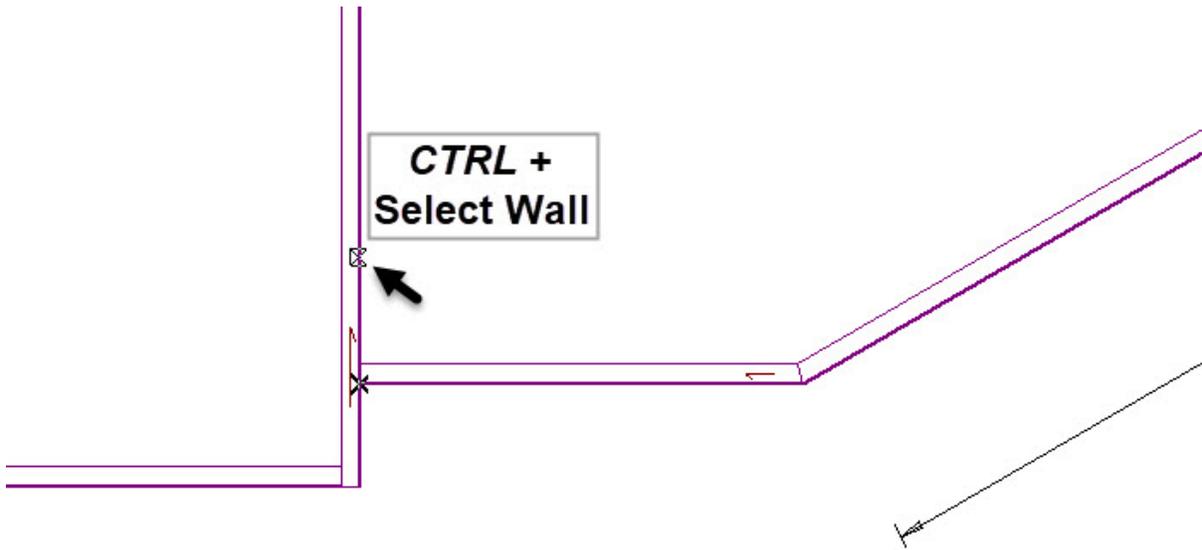

In this example, the dimensions are given for every wall of the angled extension except the wall at the bottom. While it is possible to enter and trim a wall, additional steps

mean additional time. The CTRL + Select Wall is a single step to add a wall perpendicular from your reference point to the selected wall. Using this method is a simple but effective way to ensure that your wall is closed correctly against the selected wall.

When the CTRL button on the keyboard is pressed, the system prompts "Select Wall".
